DETAILED ACTION***Double Patenting***

1. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. A nonstatutory obviousness-type double patenting rejection is appropriate where the conflicting claims are not identical, but at least one examined application claim is not patentably distinct from the reference claim(s) because the examined application claim is either anticipated by, or would have been obvious over, the reference claim(s). See, e.g., *In re Berg*, 140 F.3d 1428, 46 USPQ2d 1226 (Fed. Cir. 1998); *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) or 1.321(d) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent either is shown to be commonly owned with this application, or claims an invention made as a result of activities undertaken within the scope of a joint research agreement.

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

2. Claims 13, 32-39, and 42-47 are rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 1-20 of U.S. Patent No. 6,208,531. Although the conflicting claims are not identical, they are not patentably distinct from each other because the encapsulated transformer compartment and circuit of 6,208,531 would perform the functions as claimed.

Claim Rejections - 35 USC § 103

3. Claims 13 is rejected under 35 U.S.C. 103(a) as being unpatentable over AAPA in view of Roszyk et al. (US 3,840,795).

Regarding claim 13, AAPA discloses apparatus comprising a power converter (10) having a first circuitry in the form of a switch (20) to form a first discrete physical unit and connected to response to control information received from second circuitry in the form of a voltage sensor in a second discrete physical unit, the two physical units respectively including subparts of a device (22) for conveying control information via a galvanically isolated electromagnetic path (page 1, lines 15 through page 2, line14).

AAPA disclose everything claimed except the first and second units being discrete and encapsulated. Roszyk et al. teach a power converter circuit (figure 6) having first and second discrete encapsulated units (11, 12, col. 6, lines 26-58). It would have been obvious to one of ordinary skill in the art at the time the invention was made to encapsulate the unit in order to protect the user from shock hazard.

Response to Arguments

4. Applicant's arguments with respect to claims 13 have been considered but are moot in view of the new ground(s) of rejection.

Conclusion

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Sano (US 4,942,352) and Hasnbalg (US 3,522,509).
